

Business Requirement Document Personal Loan Feature — XYZ Mobile Banking App

Document No.	Version	Date
BRD00101	V1.0	06-08-2026

Prepared by	Reviewed by	Approved by
Esha Majumdar	Product Owner	Pending

1. The current Business Problem:

Currently the customers need to visit the XYZ bank branch to check eligibility and apply for a loan. This manual process is time consuming and causes inconvenience for the customer. Moreover increases the chances of the customer to abandon the process. As a result, the bank may experience reduced loan application volume and lower customer satisfaction.

2. The Proposed Solution:

Adding a self service loan portal into the existing XYZ Mobile Banking application where the customers can check eligibility within minutes and apply for the loan without the need to physically visit the bank.

3. In Scope:

Personal loan feature model within existing XYZ Bank mobile banking app (ios and android).

Real-time eligibility check using existing customer data (account, KYC, credit profile).

Digital loan application form and end-to-end submission workflow.

Application confirmation with unique reference number.

Application status tracking within the mobile app.

4. Out of Scope:

Home loan, vehicle loan, or any other loan product types.

Loan disbursement processing and repayment management.

Changes to the underlying credit scoring model or eligibility engine.

Web browser (desktop) version of the loan feature

5. Assumptions

Customer has an account in XYZ Bank.

Customer has enabled Mobile Banking.

Customer's KYC status must be verified and up to date.

Customer must be within the eligible age range for our personal loan product.

Customer's account should not be blocked, frozen, or under restriction.
Customer must have accepted the latest terms and conditions for digital banking.

6. Dependencies:

Core Banking System (CBS) APIs must be available for real-time customer data retrieval

Credit bureau integration (e.g., CIBIL) must be in place for eligibility assessment

KYC system integration must be accessible to validate customer documentation status

Push notification service must be operational for milestone alerts

Loan product parameters (interest rates, tenure, maximum loan amount) must be finalized by the Retail Loans Business Team before development begins

Legal sign-off on updated digital loan terms and conditions must be obtained before launch

7. Stakeholder:

Stakeholder	Role	Interest / Responsibility	Engagement
Product Owner	Decision Maker	Approves requirements; owns product vision	High
Business Analyst	Requirements Lead	documents, and validates business requirements	High
Mobile App Dev Team	Implementer	Designs and builds the loan feature within the mobile app	High
Core Banking / IT Team	Implementer	Provides APIs and backend support for data and processing	High
Compliance & Legal	Reviewer	Ensures feature meets RBI guidelines and data privacy regulations	Medium
Retail Loans Business Team	Business Owner	Defines loan product parameters and validates eligibility criteria	Medium
Customer Support Team	Support	Handles customer queries post-launch; provides feedback	Low
End Customer	Primary User	Checks eligibility and applies for a personal loan via the app	High

8. Business Requirements:

The following high-level business requirements define what the solution must achieve from a business perspective. Detailed functional specifications will be captured separately in the Functional Requirement Document (FRD).

Req. ID	Requirement	Business Need
BR-01	Feature Accessibility	The bank must provide a visible and accessible entry point to the Personal Loan feature within the mobile banking app so that eligible customers can discover and initiate the loan journey without assistance.
BR-02	Loan Information	The bank must present clear, accurate loan product information — including features, eligibility criteria, interest rates, and terms — so customers can make an informed decision before applying.
BR-03	Eligibility Check	The bank must enable customers to check their personal loan eligibility digitally using existing account and KYC data, without requiring them to visit a branch or submit manual documents.
BR-04	Eligibility Outcome	The bank must clearly communicate to the customer whether they are eligible or ineligible for a personal loan, and for eligible customers, present a pre-approved loan offer.
BR-05	Digital Application	The bank must allow eligible customers to complete and submit a personal loan application entirely within the mobile app.
BR-06	Application Confirmation	The bank must provide the customer with a unique application reference number and a confirmation message immediately upon successful submission.
BR-07	Status Tracking	The bank must allow customers to track the status of their loan application within the mobile app at any time after submission.
BR-08	Proactive Notifications	The bank must notify customers via push notification and SMS at key application milestones so customers remain informed without needing to actively check the app.
BR-09	Pending Actions	The bank must clearly display any actions required from the customer (e.g., document upload, e-signature) to avoid application delays caused by customer inaction.

9. Business Success Metric:

The following KPIs will be used to evaluate whether the Personal Loan feature has achieved its intended business outcomes, measured within 90 days of launch.

KPI	Target	How It Will Be Measured
Digital loan application volume	30% increase vs. pre-launch baseline	Core banking application data
Application completion rate	> 60% of users who start an application complete submission	Mobile app funnel analytics
Branch walk-ins for loan	20% reduction within 90 days of	Branch transaction logs

applications	launch	
Customer satisfaction score (CSAT)	Rating > 4.0 / 5.0 for the loan application journey	In-app post-submission survey
Eligibility-to-application conversion	> 40% of eligible customers proceed to submit an application	Mobile app funnel analytics
