

XYZ BANK

Mobile Banking Application

FUNCTIONAL REQUIREMENT DOCUMENT

Personal Loan Feature

Document Number	FRD00101
Version	V1.0
Date	06-08-2026
Prepared By	Esha Majumdar (Business Analyst)
Reference BRD	BRD00101 — V1.0
JAD Session Date	15-07-2026
SME Consulted	Rohan Mehta (Product Manager, Retail Loans) (AI)
Dev Observer	Priya Nair (Mobile App Lead Developer)(AI)
Status	Draft — Pending Review by Product Owner

Note: This document was prepared as part of a mock BA portfolio project.

1. Purpose of This Document

This Functional Requirement Document (FRD) has been prepared for the Personal Loan feature being added to the XYZ Bank Mobile Banking Application. It translates the high-level business goals from BRD00101 into specific, detailed system behaviors that the development and QA teams can use to build and test the feature.

The requirements in this document were collected during an AI-assisted JAD (Joint Application Design) session held on 15-July-2026. AI-generated personas representing a Retail Loans Product Manager (SME) and a Mobile App Lead Developer were used to share ideas, review requirements, and simulate real stakeholder discussions.

This document is organized as follows:

- Section 2 — Scope (what is and is not covered)
- Section 3 — Assumptions gathered from the JAD session
- Section 4 — Functional Requirements, grouped by feature area
- Section 5 — Business Rules
- Section 6 — Error and Exception Handling
- Section 7 — Non-Functional Requirements
- Section 8 — Screen Flow Summary
- Section 9 — Requirement Traceability Matrix
- Section 10 — Open Items from the JAD session

2. Scope

2.1 In Scope

- Personal Loan feature module within the existing XYZ Bank mobile app (iOS and Android)
- Conditional home screen banner shown to pre-eligible customers based on a soft background check
- Loan product information screen with EMI calculator
- Real-time eligibility check using CBS data and CIBIL integration — no manual data entry by the customer
- Pre-approved loan offer screen for eligible customers
- Multi-step digital loan application form (3 steps)
- e-Sign (OTP-based) and e-Mandate consent flow
- Application confirmation screen with unique reference number
- Post-submission SMS, push notification, and email (if email on record)
- Application status tracking with 6 statuses
- Document upload capability for the Document Pending status
- Push notification and SMS alerts at key application milestones

2.2 Out of Scope

- Home loan, vehicle loan, or any other loan product type
- Loan disbursement processing and repayment management
- Changes to the underlying credit scoring model or eligibility engine
- Web browser (desktop) version of the loan feature
- Aadhaar eSign — OTP-based e-Sign is confirmed for this release

3. Assumptions

Assumption ID	Assumption	Source
ASM-01	The customer has an active account with XYZ Bank and has Mobile Banking enabled.	BRD00101
ASM-02	The customer's KYC is verified and up to date at the time of eligibility check.	BRD00101
ASM-03	The customer's account is not blocked, frozen, or under any restriction.	BRD00101
ASM-04	CBS APIs are available and stable. If CBS is down, the eligibility check cannot proceed.	JAD Session — Rohan Mehta
ASM-05	CIBIL integration is live and available in the production environment before launch.	JAD Session — Rohan Mehta
ASM-06	Loan product parameters (interest rate band, tenure options, min/max loan amount) will be finalized by the Retail Loans Business Team before development begins.	JAD Session — Rohan Mehta
ASM-07	OTP-based e-Sign is approved by Compliance for this release. Aadhaar eSign is not required.	JAD Session — Rohan Mehta (confirmed last week per SME)
ASM-08	Legal has accepted the 24-hour eligibility result caching window as an acceptable business risk.	JAD Session — Rohan Mehta
ASM-09	Email ID is not guaranteed to be on record for all customers. Email notification is a best-effort communication, not a mandatory step.	JAD Session — Open Item OI-02 raised
ASM-10	The soft check for home screen banner targeting uses only internal CBS data and does not call CIBIL.	JAD Session — Rohan Mehta

4. Functional Requirements

Requirements are organized by feature area. Each requirement includes an ID, a name, the expected system behavior, priority (MoSCoW), and the parent Business Requirement from BRD00101.

Priority Key: M = Must Have | S = Should Have | C = Could Have | W = Won't Have (this release)

4.1 Feature Entry Point

Source: BR-01 from BRD00101 | JAD Session — Topic 1

FR ID	Requirement Name	Expected System Behavior	Priority	BR ID
FR-01	Home Screen Loan Banner	The app home screen must display a Personal Loan banner for customers who pass the background soft	M	BR-01

FR ID	Requirement Name	Expected System Behavior	Priority	BR ID
		check. The banner must show a CTA button labelled "Check Your Eligibility". The banner must not appear for customers whose account is not active, whose KYC is expired, or who already have an open personal loan application with XYZ Bank.		
FR-02	Soft Background Check on Login	When a logged-in customer's home screen loads, the system must silently perform a soft eligibility pre-check using: (1) account active status from CBS, (2) KYC validity from KYC system, and (3) whether an open personal loan application already exists. This check must complete within 2 seconds added to login load time. If it takes longer or fails, the banner must not appear — the menu entry still shows.	M	BR-01
FR-03	Loans Menu Entry	The main navigation menu must always show a "Loans" section, regardless of whether the customer is eligible. Tapping "Loans" must navigate the customer to the Loan Products landing page.	M	BR-01
FR-04	Loan Products Landing Page	The Loan Products landing page must display a "Personal Loan" card showing the product name, a one-line description, and a "Know More" button. For this release, only one product is shown.	M	BR-01
FR-05	Banner State After Submission	Once a customer successfully submits a loan application, the home screen banner must change from the eligibility CTA to a "Track Your Application" shortcut that links directly to the Application Status screen.	M	BR-01

4.2 Loan Information Screen

Source: BR-02 from BRD00101 | JAD Session — Topic 2

FR ID	Requirement Name	Expected System Behavior	Priority	BR ID
FR-06	Product Details Screen	Tapping "Know More" must open a Product Details screen containing: loan amount range (Rs. 50,000 to Rs. 15,00,000), interest rate band (starting from 10.5% p.a.), available tenure options, processing fee details, and key eligibility criteria written in plain language.	M	BR-02
FR-07	EMI Calculator	The Product Details screen must include a built-in EMI calculator. The customer enters a loan amount and selects a tenure. The system must calculate and display the estimated monthly EMI in real time (no "Calculate" button needed — updates as the customer types). The calculator must use 10.5% p.a. as the rate. A disclaimer must be shown: "Actual interest rate may vary based on your credit profile."	M	BR-02
FR-08	EMI Formula	EMI calculation must follow the standard formula: $EMI = [P \times R \times (1+R)^N] / [(1+R)^N - 1]$, where P = Principal, R = Monthly Rate, N = Tenure in months. This is a client-side calculation — no API call required.	M	BR-02

FR ID	Requirement Name	Expected System Behavior	Priority	BR ID
FR-09	Terms & Conditions Link	The Product Details screen must include a visible link to the full loan Terms & Conditions document. Tapping it must open the document in an in-app browser or PDF viewer. This is informational only — no forced acceptance at this screen.	S	BR-02

4.3 Eligibility Check

Source: BR-03 from BRD00101 | JAD Session — Topic 3

FR ID	Requirement Name	Expected System Behavior	Priority	BR ID
FR-10	Initiate Eligibility Check	When a customer taps "Check Your Eligibility" from any entry point (banner or menu), the system must automatically initiate an eligibility assessment. The customer must not be required to manually enter any information — all data is fetched from existing systems.	M	BR-03
FR-11	Data Fetched for Eligibility	The system must automatically retrieve the following without customer input: - Full name and date of birth (CBS) - KYC status — must be verified and not expired (KYC system) - Account standing — must not be blocked, frozen, or restricted (CBS) - Average monthly balance or salary credits from last 3 months (CBS transaction data) - Existing loan obligations with XYZ Bank (CBS) - CIBIL credit score (CIBIL bureau integration — real-time call)	M	BR-03
FR-12	Loading State During Check	While the eligibility check is being processed, the app must show a loading animation with the message "Checking your eligibility, this will just take a moment...". The maximum acceptable wait time is 10 seconds.	M	BR-03
FR-13	Eligibility Result Caching	If a customer has completed an eligibility check within the last 24 hours, the system must skip the check and take them directly to their previous result screen. The cached result must expire after 24 hours, after which the check must be re-run.	M	BR-03

4.4 Eligibility Outcome

Source: BR-04 from BRD00101 | JAD Session — Topic 4

FR ID	Requirement Name	Expected System Behavior	Priority	BR ID
FR-14	Eligible Outcome Screen	If the customer is eligible, the system must display a screen showing: a congratulatory message, the maximum pre-approved loan amount (e.g., "You are eligible for up to Rs. 8,00,000"), the specific interest rate	M	BR-04

FR ID	Requirement Name	Expected System Behavior	Priority	BR ID
		offered to them (not a range — the exact rate based on their CIBIL profile), available tenure options, estimated EMI for the default tenure, and an "Apply Now" CTA button.		
FR-15	Ineligible Outcome Screen	If the customer is not eligible, the system must display a polite message: "Based on our current assessment, you are not eligible for a Personal Loan at this time." No specific reason for ineligibility must be shown. A "Learn More" link must be shown directing to a general help article about loan eligibility.	M	BR-04
FR-16	Binary Eligibility Decision	The eligibility engine must return one of two outcomes only: Eligible or Not Eligible. There is no partial eligibility state. If eligible, the maximum loan amount is shown. The customer can apply for any amount equal to or below that maximum.	M	BR-04

4.5 Loan Application Form

Source: BR-05 from BRD00101 | JAD Session — Topic 5

FR ID	Requirement Name	Expected System Behavior	Priority	BR ID
FR-17	Application Form Structure	The loan application form must be split into 3 steps: Step 1: Offer Confirmation — customer selects loan amount and tenure. Step 2: Personal Details Review — customer reviews pre-filled information. Step 3: Consent & Submit — e-Sign and e-Mandate consent, then final submission. Going back to a previous step must preserve all entered data.	M	BR-05
FR-18	Pre-filled Fields	The following fields must be pre-filled from existing systems and shown to the customer for review (not re-entry): Full name, Date of birth, PAN number, Residential address (from KYC), Primary account number for disbursement. If the customer has multiple accounts, a dropdown must appear for them to choose a disbursement account.	M	BR-05
FR-19	Customer Input Fields	The customer must only be required to fill or choose: (1) Loan amount — within the pre-approved range. (2) Repayment tenure — from available options only (no free text). (3) Loan purpose — from a dropdown: Personal Use, Medical Emergency, Home Renovation, Travel, Education, Debt Consolidation, Other. If "Other" is selected, a text box appears with a 100-character limit.	M	BR-05
FR-20	Form Validations	The following validations must be applied before the customer can proceed: - Loan amount must be in multiples of Rs. 10,000 - Loan amount must be between Rs. 50,000 and the pre-approved maximum - Tenure must be one of the available options (cannot be typed freely)	M	BR-05

FR ID	Requirement Name	Expected System Behavior	Priority	BR ID
		- Loan purpose must be selected - Disbursement account must not be blocked or restricted - The Submit / Next button must remain disabled until all mandatory fields are filled - Inline error messages must appear below the specific field that has an issue		
FR-21	e-Sign Flow	On Step 3, before submission, the customer must: (1) View the full loan agreement as a scrollable document within the app. (2) Check a checkbox to confirm they have read and accept the loan T&C. (3) Complete e-Sign by entering an OTP sent to their registered mobile number. The OTP must expire after 5 minutes. If the OTP expires, the customer must be able to request a new one without losing any form data.	M	BR-05
FR-22	e-Mandate Flow	After completing e-Sign, the customer must complete e-Mandate consent separately. The screen must show: the account to be debited, the maximum monthly debit amount, and the mandate start date. The customer must check a consent checkbox and enter a second OTP (separate from the e-Sign OTP) sent to their registered mobile number. These are two legally separate consents and must not be combined.	M	BR-05
FR-23	Document Preview on Upload	Wherever a document upload option is shown in the app, the customer must be able to preview the uploaded file before confirming. Upload must not proceed without customer confirmation of the correct file.	S	BR-05

4.6 Application Confirmation

Source: BR-06 from BRD00101 | JAD Session — Topic 6

FR ID	Requirement Name	Expected System Behavior	Priority	BR ID
FR-24	Confirmation Screen	Immediately after a successful application submission, the system must display a Confirmation screen containing: unique Application Reference Number (format: XYZ-LOAN-DDMMYYYY-XXXXX, e.g. XYZ-LOAN-06082026-00001), submission date and time, summary of applied loan amount and tenure, estimated EMI, and a message stating: "We will review your application within 2 working days."	M	BR-06
FR-25	Post-Submission SMS	The system must send an SMS to the customer's registered mobile number confirming receipt of their application. The SMS must include the Application Reference Number. SMS delivery failure must not block or reverse the application — the submission is considered successful regardless of SMS status.	M	BR-06
FR-26	Post-Submission Push Notification	A push notification must be sent to the customer's device immediately after submission, including the	M	BR-06

FR ID	Requirement Name	Expected System Behavior	Priority	BR ID
		Application Reference Number and a link to the Application Status screen.		
FR-27	Post-Submission Email	If the customer's email ID is on record in CBS, the system must send a confirmation email with a PDF summary of the application attached. If email ID is not available, this step is skipped silently.	S	BR-06
FR-28	Enable Notifications Prompt	Immediately after the confirmation screen, if the customer has not enabled push notifications on their device, the app must show a one-time prompt: "Enable notifications to stay updated on your loan application status" with two options — "Enable" and "Maybe Later". If the customer taps "Maybe Later", this prompt must not appear again for the same application.	S	BR-06

4.7 Application Status Tracking

Source: BR-07 from BRD00101 | JAD Session — Topic 7

FR ID	Requirement Name	Expected System Behavior	Priority	BR ID
FR-29	My Loan Applications Screen	A "My Loan Applications" section must be accessible from: (1) the home screen, (2) the Loans menu, and (3) the post-submission confirmation screen. It must list all loan applications submitted by the customer, showing: Reference Number, Application Date, Loan Amount Applied, and Current Status.	M	BR-07
FR-30	Application Status Values	The following status values must be supported for this release: - Submitted: "We have received your application and it is being processed." - Under Review: "Your application is currently being reviewed by our team." - Document Pending: "We need some additional documents from you. Please check below." - Approved: "Congratulations! Your personal loan has been approved." - Rejected: "We regret that your loan application has not been approved at this time." - Document Overdue: "The document upload deadline has passed. Our team will contact you." Note: "Disbursed" status is deferred to the next release.	M	BR-07
FR-31	Application Detail Screen	Tapping on an application from the list must open a detail screen showing: full application summary, complete status history with timestamps, current status message, and any pending action required from the customer.	M	BR-07
FR-32	Document Upload in App	When status is "Document Pending", the detail screen must clearly state which document is required and provide an "Upload Document" button. Accepted formats: PDF and JPEG only. Maximum file size: 5 MB.	M	BR-07

FR ID	Requirement Name	Expected System Behavior	Priority	BR ID
		The customer must be able to preview the uploaded file before confirming upload.		
FR-33	Document Upload Deadline	The customer must upload required documents within 5 working days of the status moving to "Document Pending". The deadline date must be shown on the detail screen and in notifications. If the deadline passes without upload, the status must automatically change to "Document Overdue" and the case must be escalated to the Operations team.	M	BR-07

4.8 Notifications

Source: BR-08 from BRD00101 | JAD Session — Topic 8

FR ID	Requirement Name	Expected System Behavior	Priority	BR ID
FR-34	Push Notification Triggers	Push notifications must be sent at the following events: - Application successfully submitted (with Reference Number) - Status changed to Under Review - Status changed to Document Pending (with direct link to upload screen) - Document successfully uploaded - Status changed to Approved - Status changed to Rejected	M	BR-08
FR-35	SMS Notification Triggers	SMS must be sent for: application submission confirmation, final approval or rejection. SMS must include the Application Reference Number.	M	BR-08
FR-36	Notification Deep Links	Every push notification must include a deep link that takes the customer directly to the relevant Application Detail screen within the app when tapped — not just to the app home screen.	M	BR-08
FR-37	Notification Preference Handling	If the customer has disabled push notifications on their device, the system must fall back to SMS only. Push notifications must not be forced. The "Enable Notifications" prompt (FR-28) is the only point at which the customer is encouraged to enable notifications.	M	BR-08
FR-38	Document Deadline Reminder Notification	A reminder push notification and SMS must be sent 2 working days before the document upload deadline. Message must clearly state the number of days remaining and include a deep link to the upload screen.	M	BR-08

5. Business Rules

Business rules are constraints that govern system logic — they are different from functional requirements because they define what is and is not allowed, not what the system does step by step. These rules were confirmed directly with Rohan Mehta during the JAD session.

BA Note: I separated business rules from functional requirements because during the JAD session, the SME often gave me numbers, thresholds, and conditions that drive logic. These go into business rules, not FRs.

BR ID	Rule	Source
RULE-01	Minimum loan amount: Rs. 50,000. Maximum loan amount: Rs. 15,00,000.	JAD Session
RULE-02	Loan amount entered by the customer must be in multiples of Rs. 10,000 only.	JAD Session
RULE-03	Interest rate band: 10.5% to 16% per annum. The exact rate offered to a customer depends on their CIBIL score. The rate band is shown on the product page; the exact rate is revealed only on the offer screen.	JAD Session
RULE-04	Minimum CIBIL score for eligibility: 700. This threshold must not be visible to the customer at any point in the app.	JAD Session
RULE-05	Eligibility check result is valid for 24 hours. After 24 hours the result expires and must be re-run.	JAD Session
RULE-06	Home screen banner soft check uses only: account active status, KYC validity, and existence of an open application. CIBIL is not called for the banner pre-check.	JAD Session
RULE-07	Ineligibility reasons must not be communicated to the customer — per Compliance team decision.	JAD Session
RULE-08	Rejection reasons must not be communicated to the customer — per Compliance team decision.	JAD Session
RULE-09	e-Sign and e-Mandate are two legally separate consents and must have separate OTP verifications.	JAD Session
RULE-10	Both OTPs (e-Sign and e-Mandate) expire after 5 minutes. On expiry, a new OTP can be requested without losing form data.	JAD Session
RULE-11	Document upload for Document Pending status: only PDF and JPEG formats accepted. Maximum file size 5 MB per file.	JAD Session
RULE-12	Document upload deadline: 5 working days from the date the status moves to Document Pending. If not uploaded, status changes to Document Overdue and case is escalated to Operations. Application is not auto-rejected.	JAD Session
RULE-13	Loan purpose selection is for internal reporting and RBI compliance only. It does not affect the loan offer or eligibility outcome.	JAD Session
RULE-14	The disbursement account selected by the customer must not be a blocked or restricted account.	JAD Session
RULE-15	Application submission success is not dependent on SMS or email delivery. Communications are best-effort and must not block or reverse submission.	JAD Session

6. Error and Exception Handling

This section captures what the system should do when things go wrong. These were discussed in the JAD session when I asked "what if" questions for every integration point.

BA Note: Error handling is one of the sections most often missed by fresher BAs. I have tried to cover every external dependency and what the fallback should be, since these directly affect the user experience.

ERR ID	Scenario	Expected System Response
ERR-01	CBS API is unavailable during login soft check (banner pre-check)	Skip the soft check silently. Do not show the banner. The Loans menu entry must still be visible. Log the failure for monitoring.
ERR-02	CBS API is unavailable during eligibility check	Display error message: "We are unable to complete your eligibility check right now. Please try again in a few minutes." Show a Retry button. Do not mark the customer as ineligible — this is a system error, not an eligibility outcome.
ERR-03	CIBIL bureau call fails or times out during eligibility check	Same behaviour as ERR-02. The system must distinguish between a system error and an ineligibility result when communicating to the customer. Do not show the ineligible outcome screen for a technical failure.
ERR-04	Eligibility check takes more than 10 seconds	Cancel the pending request. Display error message: "This is taking longer than expected. Please try again." Show a Retry button. Preserve any session data.
ERR-05	OTP not received by the customer (e-Sign or e-Mandate)	Display a "Resend OTP" link. The customer can request a new OTP. The resend option must be available after 30 seconds from the previous OTP request. All form data must be preserved.
ERR-06	OTP entered incorrectly 3 times	Lock the OTP input for 10 minutes after 3 incorrect attempts. Display message: "Too many incorrect attempts. Please try again after 10 minutes." Form data must be preserved.
ERR-07	OTP expires before the customer enters it	Display message: "Your OTP has expired. Please request a new one." Show a "Resend OTP" button. All form data must be preserved.
ERR-08	Application submission API fails	Display error: "Something went wrong while submitting your application. Please try again." Show a Retry button. Do not create a duplicate application on retry — implement idempotency at the API level. (Note: This is a technical flag for the dev team.)
ERR-09	SMS gateway fails post-submission	The application is still considered successfully submitted. Log the SMS failure for the operations team to retry manually. Do not show an error to the customer for SMS failure.
ERR-10	Document upload fails	Display error: "Upload failed. Please check your file format and size and try again." The customer must be able to retry without losing their file selection. Accepted formats reminder (PDF, JPEG, max 5 MB) must be shown.

ERR ID	Scenario	Expected System Response
ERR-11	Customer has no internet connection during any action	Display a generic offline message: "No internet connection. Please check your network and try again." Show a Retry button. No data must be lost.

7. Non-Functional Requirements

These requirements define how the system should perform, not what it should do. Numbers below are based on the JAD session discussion and general industry benchmarks for banking mobile apps.

Category	Requirement	Metric / Target
Performance	Eligibility check must complete within acceptable time	Max 10 seconds end-to-end (includes CIBIL call)
Performance	Soft pre-check on login must not significantly delay home screen load	Max 2 seconds additional load time
Performance	Loan application form pages must load quickly	Under 3 seconds per step
Performance	Confirmation screen must appear promptly after submission	Within 5 seconds of submission
Security	All data transmitted between the app and server must be encrypted	TLS 1.2 or higher
Security	All sensitive customer data stored at rest must be encrypted	Per XYZ Bank data security policy
Security	OTPs must have a short validity window	5 minutes per OTP (both e-Sign and e-Mandate)
Security	After 3 incorrect OTP attempts, access must be locked temporarily	10-minute lockout after 3 wrong attempts
Availability	Personal Loan feature must be available during business hours	99.5% uptime — 9 AM to 9 PM IST
Availability	Planned maintenance must be communicated in advance	In-app notification at least 24 hours before scheduled downtime
Compliance	Feature must follow RBI digital lending guidelines	No specific metric — regulatory requirement
Compliance	All customer consents (T&C, e-Sign, e-Mandate) must be logged with timestamps	Audit log retained per XYZ Bank data retention policy
Compatibility	App must work on iOS and Android	iOS 14 and above, Android 9 and above
Compatibility	UI must adapt to different screen sizes	Screens from 5 to 6.7 inches
Accessibility	App must be accessible for users with disabilities	WCAG 2.1 Level AA — includes font scaling and screen reader support

8. Screen Flow Summary

This section summarizes the complete customer journey through the Personal Loan feature from start to finish. I created this after the JAD session to verify that all touchpoints were captured and nothing was missed.

Step	Screen / Action	Who / What Triggers It	Key Output / Next Step
1	App Login — Soft Pre-Check	Customer logs in to the mobile app	System silently checks account, KYC, open applications in CBS
2	Home Screen — Conditional Banner	Soft check passes	Customer sees "Check Your Eligibility" banner. If check fails or takes too long, no banner shown.
3	Loan Products Landing Page	Customer taps Loans in menu OR taps banner	Personal Loan card shown with "Know More" button
4	Product Details Screen	Customer taps "Know More"	Product info, EMI calculator, T&C link shown
5	Eligibility Check — Loading Screen	Customer taps "Check Your Eligibility"	System calls CBS + CIBIL in background. Loading message shown. Max 10 seconds.
6A	Eligible Outcome Screen	CIBIL score $\geq$ 700 and all checks pass	Pre-approved offer shown: max amount, exact rate, tenure options, EMI. "Apply Now" button.
6B	Ineligible Outcome Screen	Any eligibility check fails	Polite decline message. No reason given. "Learn More" link shown.
6C	Error Screen	CBS or CIBIL API fails	Technical error message (different from ineligible). Retry button shown.
7	Application Form — Step 1: Offer Confirmation	Customer taps "Apply Now"	Customer selects loan amount and tenure within pre-approved offer parameters
8	Application Form — Step 2: Personal Details Review	Customer taps Next on Step 1	Pre-filled details shown for review. Customer confirms or updates account for disbursement.
9	Application Form — Step 3: Consent & Submit	Customer taps Next on Step 2	Loan agreement shown. Customer reads, accepts T&C, completes e-Sign OTP. Then e-Mandate consent and OTP.
10	Application Confirmation Screen	Successful submission	Reference number, summary, estimated timeline. SMS + Push + Email sent simultaneously.
11	Enable Notifications Prompt	Right after confirmation (if push notifications are off)	One-time prompt. Customer can enable or dismiss.
12	My Loan Applications — Status Tracking	Customer returns to app at any time after submission	Current status shown. Deep link from every notification.
13	Document Upload Screen	Status changes to Document Pending	Customer sees which document is needed. Uploads PDF or JPEG (max 5 MB). Previews before confirming.

9. Requirement Traceability Matrix

This matrix maps every Functional Requirement in this FRD back to its parent Business Requirement in BRD00101. This is used to ensure nothing from the BRD has been missed and that every FR has a business justification.

FR ID	Functional Requirement	Parent BR ID	Section in FRD
FR-01	Home Screen Loan Banner	BR-01	4.1
FR-02	Soft Background Check on Login	BR-01	4.1
FR-03	Loans Menu Entry	BR-01	4.1
FR-04	Loan Products Landing Page	BR-01	4.1
FR-05	Banner State After Submission	BR-01	4.1
FR-06	Product Details Screen	BR-02	4.2
FR-07	EMI Calculator	BR-02	4.2
FR-08	EMI Formula	BR-02	4.2
FR-09	Terms & Conditions Link	BR-02	4.2
FR-10	Initiate Eligibility Check	BR-03	4.3
FR-11	Data Fetched for Eligibility	BR-03	4.3
FR-12	Loading State During Check	BR-03	4.3
FR-13	Eligibility Result Caching	BR-03	4.3
FR-14	Eligible Outcome Screen	BR-04	4.4
FR-15	Ineligible Outcome Screen	BR-04	4.4
FR-16	Binary Eligibility Decision	BR-04	4.4
FR-17	Application Form Structure	BR-05	4.5
FR-18	Pre-filled Fields	BR-05	4.5
FR-19	Customer Input Fields	BR-05	4.5
FR-20	Form Validations	BR-05	4.5
FR-21	e-Sign Flow	BR-05	4.5
FR-22	e-Mandate Flow	BR-05	4.5
FR-23	Document Preview on Upload	BR-05 / BR-07	4.5
FR-24	Confirmation Screen	BR-06	4.6
FR-25	Post-Submission SMS	BR-06 / BR-08	4.6
FR-26	Post-Submission Push Notification	BR-06 / BR-08	4.6
FR-27	Post-Submission Email	BR-06	4.6
FR-28	Enable Notifications Prompt	BR-06 / BR-08	4.6
FR-29	My Loan Applications Screen	BR-07	4.7

FR ID	Functional Requirement	Parent BR ID	Section in FRD
FR-30	Application Status Values	BR-07	4.7
FR-31	Application Detail Screen	BR-07	4.7
FR-32	Document Upload in App	BR-07 / BR-09	4.7
FR-33	Document Upload Deadline	BR-07 / BR-09	4.7
FR-34	Push Notification Triggers	BR-08	4.8
FR-35	SMS Notification Triggers	BR-08	4.8
FR-36	Notification Deep Links	BR-08	4.8
FR-37	Notification Preference Handling	BR-08	4.8
FR-38	Document Deadline Reminder Notification	BR-08 / BR-09	4.8

10. Open Items

The following items came up during the JAD session and are not yet resolved. These need to be closed before the FRD can be finalized and handed over to the development team.

OI ID	Open Item	Why It Matters	Owner	Target Date
OI-01	Home screen banner marketing copy is not yet finalized.	The banner CTA text ("Check Your Eligibility") is confirmed but the surrounding banner copy needs Marketing team input before UI design begins.	Marketing Team	TBD
OI-02	It is not confirmed whether email ID is a mandatory field in CBS for all customers.	FR-27 (post-submission email) depends on this. If email is not reliably available, email confirmation may be deprioritized or removed.	Core Banking / IT Team	TBD
OI-03	The e-Mandate maximum debit amount formula has not been confirmed.	FR-22 requires showing the maximum monthly debit amount on the e-Mandate consent screen. It is unclear if this equals the EMI amount exactly or includes a buffer.	Retail Loans Business Team	TBD
OI-04	Final wording for the document deadline reminder notification has not been approved.	FR-38 requires a reminder notification 2 working days before deadline. Copy needs approval from Product / Marketing before implementation.	Product Owner / Marketing	TBD

OI ID	Open Item	Why It Matters	Owner	Target Date
OI-05	The escalation SLA for Operations team after Document Overdue status is not defined.	RULE-12 states the case goes to Operations, but the operations team has not confirmed their internal SLA for follow-up. This affects what the customer should be told about next steps.	Operations Team	TBD

BA Note: I will follow up with each owner listed above and update this section as items are closed. The FRD version number will be updated to V1.1 once all open items are resolved.

11. Document Version History

Version	Date	Author	Changes Made
V1.0	06-08-2026	Esha Majumdar	Initial draft created based on BRD00101 V1.0 and JAD session conducted on 15-07-2026 with Rohan Mehta (SME) and Priya Nair (Dev Lead).

Prepared by: Esha Majumdar — Business Analyst (Mock Portfolio Project)
